Fractures with Soft Tissue Injuries H. Tscherne, L. Gotzen, 2012-12-06 Progress in medical science, and the deepening of physician experience in general, make continuing education a fundamental obligation on the part of the practicing physician. Besides academies of advanced medical training, we feel that medical schools and universities offer a particularly good setting for continuing medical education. When the Hannover Medical School established West Germany’s first Department of Trauma Surgery in 1970, we committed ourselves to this goal and instituted the Hannover Trauma Seminars as a regional forum for continuing physician education. Made up almost entirely of our colleagues at the Trauma Surgery Clinic, the basic goal of the seminars is to review new discoveries and techniques in the field of traumatology and assess their practical relevance to the physician who treats trauma victims. In addition to research, the experience of the Hannover School of Trauma Surgery form an important basis for seminar activities. The first Trauma Seminar was held on February 2, 1972. Initially, copies of the proceedings were simply distributed to all interested participants. But as attendance grew and demand for the proceedings increased, it became necessary to seek a broader form of publication. Henceforth, the Hannover Trauma Seminars will be published as part of the Topics in Traumatology series. For this we are grateful to Springer Verlag and to series editors Jorg Re— and Leonhard Schweiberer.

**Fragility Fracture Nursing** Karen Hertz, Julie Santy-Tomlinson, 2018-06-15

This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality
of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.
